Please don't change the structure of this table, just insert the necessary information.

1 3D source video sequences

VQEG has been facing the recurrent problem of getting access to freely available video content that can be distributed and used in the context of standards-related work.

In order to support the standards-related work in the field of stereoscopic 3D video quality assessment, Technicolor is making available a set of stereoscopic 3D video sequences.

The set contains four videos of approximately 1 minute of duration each. The videos are available in 1920x1080 resolution for each view, in progressive format, and 30 frames per second. The videos are provided in uncompressed AVI.

The videos were capture, edited and corrected to comply with Technicolor's 3D quality control process [1].

2 Conditions of usage

All sequences from this set may be distributed freely as long as the copyright and the restrictions of the use of the sequences are not violated. It is not allowed to charge fees for the distribution of the sequences. The README document accompanying the video sequences has to be included with any part of the test set that is distributed.

Please acknowledge Technicolor in any program or publication using these 3D videos.

Copyright and Restrictions of Use

These 3D videos are Copyright © 2013, Technicolor.

Individuals and organizations using these sequences from this test set agree that the sequences and all intellectual property rights therein remain the property of Technicolor.

These sequences can only be used for the purpose of research, and for the purpose of developing and testing technology standards. These sequences cannot be used for tradeshows or commercial purposes.

Technicolor makes no warranties with respect to the materials and expressly disclaim any warranties regarding their fitness for any purpose. These videos are distributed WITHOUT ANY WARRANTY; without even the implied warranty of MERCHANTABILITY or FITNESS FOR A PARTICULAR PURPOSE.
